# Bugreport about FontSelf 3.5.1

For Adobe Illustrator CC 2020 (24.1.0), MacOS X 10.14.6 (german)

I've create a color and a black font last month.

Today I added two new characters to the fonts with the name ›ø‹ and ›Ø‹.

In the color version I found a funny thing (red becomes black):

The black circle should be red, like I created it in AI and like in Fontself 3.5.1

The problem is the name ›ø‹ or ›Ø‹ (An umlaut in Danish, Swedish and Norwegian) of the character in AI. When I name the symbol with ›ø‹ or ›Ø‹ in AI and put it into Fontself, it will be black in Apple FontBook. :-(

When I don's name the symbol in AI, put it into FontSelf and rename it with ›ø‹ or ›Ø‹, then the symbol is red in Apple FontBook. :-)

I tried this also with a AI-document and as a new font. The result is the same. Funny thing!

Happy bug hunting!

P. S. In the ZIP-Archive is my test file .ai and .otf
